

1982 PEUGEOT RANGE

COME AND TEST DRIVE A PEUGEOT AT:

Every endeavour has been made to ensure that the information contained in this folder was accurate at the time of going to press. Peugeot Talbot, however, reserve the right while preserving the essential characteristics of the models described and illustrated in this folder to introduce at any time, modifications, changes of detail, equipment or accessories as may be considered necessary. The folder will be up-dated from time to time but in order to avoid any misunderstanding any person interested in purchasing a vehicle should enquire of an authorised Peugeot dealer as to whether there have been any material alterations since the date of the issue of this folder.

THESE FIGURES ARE THE RESULTS OF APPROVED TESTS AS RECORDED BY THE DEPARTMENT OF ENERGY IN OFFICIAL FUEL ECONOMY CERTIFICATES

* Diesel consumption in accordance with French Government test procedures.

6 Years' Anti-corrosion Guarantee

All Peugeots have the benefit of a six years' anti-corrosion guarantee on all body or underbody panels and each unit is meticulously treated against permanent spread of corrosion by total immersion in a cathodic electrophoretic bath – a process which makes the body shell particularly resistant to corrosion.

But Peugeot's answer to corrosion is not confined solely to this technological innovation of anti-corrosive cathodic electrophoresis. Peugeot uses in addition all the well established anti-corrosion coatings of proven resistance value, and these are applied before and after the electrophoretic bath.

To benefit from this guarantee involves only two checks of the car [taking about 2 hours depending on model, carried out at the expense of the customer at the end of the second and fourth years of service] at a Peugeot Dealer. The Peugeot 6 year anti-corrosion guarantee is transferable on change of ownership.

Peugeot thus gives further proof, were it needed, that you may regard the purchase of your Peugeot as a good investment.

- 1. Sheet Metal:** Certain body items which are difficult to protect and liable to corrosion are made of zinc-plated or galvanised steel.
- 2. Phosphating:** Improves adhesion of resin film in the electrophoretic bath.
- 3. Cathodic Electrophoretic Bath:** A film of epoxy resin is deposited on the whole of the body shell. Box sections are pierced to enable internal surfaces to be reached and protected.
- 4. Pressure injection of wax into box sections:** Protection of internal wall surfaces, preventing water from penetrating between panels.

- 5. PVC Anti-chipping compound:** Protection of those parts of the body which are subject to attack by loose stones.
- 6. Primer:** The undercoat includes oxydisation-inhibiting pigments [zinc chromates] which improve anti-corrosion protection. Anti-chipping qualities are also included.
- 7. NAD (Non-aqueous dispersion) Acrylic Lacquer:** Thermosetting by baking at above 150°C. High covering power.
- 8. Clear Varnish (On metallic and black paint only):** Increased brilliance and better protection of the pigmentation of the colour coat against corrosive elements in the atmosphere.
- 9. Wax Bitumen Compound:** Applied over the whole of the underbody and mechanical components.
